DETAILED ACTION

This Office Action is in response to the amendment filed September 15, 2003 for the above identified patent application.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3, 7, and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Lehman (US Patent 2,884,790).

Lehman discloses a vibrating device comprising a rigid shaft (44) having shaft sections attached to reduced diameter portions (~~46~~) thereof, each shaft section supported by essentially one bearing (28), an eccentric weight (40) connected to the shaft, wherein the joint is rigid and adapted to transmit bending moment.

3. Claims 1-3, 7, and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Fewel (US Patent 4,387,539).

Fewel discloses a vibrating device comprising a rigid shaft (44) having shaft sections (46,50) attached to end portions thereof, each shaft section supported by essentially one hydrodynamic bearing (46), an eccentric weight (32) connected to the shaft, wherein the joint is rigid and adapted to transmit bending moment.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 4, 5, and 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over at least one of Lehman (US Patent 2,884,790) or Fewel (US Patent 4,387,539) as applied to claims 1-3 above, and further in view of Redinger (US Patent 1,615,233).

Lehman or Fewel do not disclose the joint as having conical surfaces, but joining two rotary components by the claimed joint was known in the art. For example, the prior art to Redinger disclose a conical joint having an axial screw. It would have been obvious to one of ordinary skill in the art at the time the invention was made to connect the shafts of Lehman or Fewel with a joint having conical surfaces, as taught by Redinger, motivation being to provide a secure and reliable joint between components.

6. Claims 6 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over at least one of Lehman (US Patent 2,884,790) or Fewel (US Patent 4,387,539) as applied to claims 1-3 above.

Lehman or Fewel do not disclose the joint as having surfaces in the shape of a pyramid. However joining two rotary components by corresponding surfaces was

known in the art. It would have been obvious to one of ordinary skill in the art at the time the invention was made to joint the shaft components of Lehman or Fewel with a joint having surfaces formed as a pyramid, as is known in the art, motivation being to provide a rigid and reliable joint between components.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note the prior art to Mooney ('189) and Philippovic ('594).
